Dear Friends:

The picture above was taken right before Christmas, with the family practicing our carol singing. That's Eddie at the organ with me, with Annette and Karen on either side of their mother.

Again, we want to say "Thank You" from all of us here at the May Seed and Nursery Co. We feel that every order we receive from you is an expression of trust and confidence, and you can be sure we'll do all we can to continue to merit that trust.

Be sure to notice two new "All American" families of plants: All-American Award Glads on Page 8 and All-American Mums on Page 9. As usual, the All-American Roses, Vegetables and Flowers are featured, too, in their respective places.

Don't forget to check the Bonus Orders on Pages 35 and 38, and be sure to include them in your order. They increase the value of your order by at least 20%, and cost you only a few cents each.

Again, thanks for your orders. We are looking forward to hearing from you again soon.

Sincerely,

Edward May

Brownell SUB-ZERO Hybrid Tea Roses

These remarkable roses come through winters of 15° below zero without any protection. If a good mulch is provided, they will winter through in areas where the temperatures plummet from 15° to 40° below zero. For size, color, and form, the Brownells compare with the very best. The blooms are large, and due to extra thriftiness and hardiness, they'll bloom more abundantly and consistently throughout the season. Each will surprise and delight you with a different, pleasing fragrance. For dependable, year-after-year rose beauty, you can do no better.

Landscape....with ANNUALS

STRETCH YOUR GARDEN DOLLAR THIS FAST, EASY WAY!

The bare land around your home can be dressed up quicker than you imagine . . . and on the tiniest of budgets. The trick lies in learning to landscape with inexpensive annuals.

Annuals are plants that go through an entire life cycle, from seed to flower, in one season. No matter what your soil, or the amount of shade or sun your garden receives, you're sure to find some annuals especially suited to your conditions.

You can acquire your permanent landscaping (shrubs, perennials, evergreens) a few at a time. But your inexpensive annual planting will bloom and beautify right away.

On this page, and the pages that follow, you'll find a small numbered circle on each flower. This number refers to the picture above, and the chart at right.

For instance, Petunias are number (3). A glance at the chart or the picture shows that we recommend them for low beds. While Kochia pinch-hits for Evergreens in accent plantings (6) and for slower-growing and more expensive hedges (2) in the picture above. And look how Castor Beans (6) and Vines (7) soften the lines of the house!

A dollar or two spent on seeds, a little ingenuity in planning and planting, and you'll have a flattering frame for your home.

USE THIS CHART

with the picture above and the numbers on flowers on the next 4 pages, to plan your annual landscape plan.

GERMAYTREATED AND TRIPLE TESTED

The ideal combination for Vegetable Garden Success!

Our Garden Seed program is designed with one thought in mind: to bring our customers the finest seeds we can. We've developed two important steps toward that end:

First, TRIPLE - TESTING. Earl May garden seeds are tested in our laboratories, where trained experts test for purity and germination, using scientifically-designed equipment. Next, they're tested in our 76-Acre Test Gardens, where both new and old established strains and varieties are grown, measured, weighed and accurate records are kept as to length of maturity, reactions to climate, productivity, characteristics. Then, the vegetables themselves are tested on our tables: our families pass on flavor and texture. The varieties that rank high in these tests are offered for sale to our customers.

The second part of our program is the GerMAY-treated process; a scientific treatment that protects seeds against destructive soil-borne organisms. It promotes better germination under adverse soil and weather conditions. The GerMAY-treated process is transparent . . . does not change the color of the seed. No poisonous metallic compounds are used in the process. Tests have proved GerMAYtreated is entirely non-toxic.

We have marked the GerMAYtreated vegetables on the following pages. Look for the GerMAYtreated symbol: another example of our continuing research to bring you better things for yard and garden.

NEW EVERBEARING BURPEE HYBRID

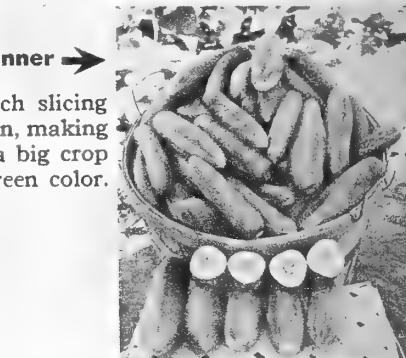

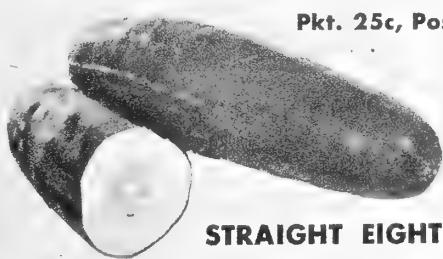

Yields Heavily When Others Fail. Keeps Producing Until Frost.

354. (60 days.) Anytime after the vine growth was well started in late June until frost came you could stand off 100 yards from our Test Plantings and tell which was the hybrid. *The growth was that much more vigorous. The set of fruit was heavier. And, after the open pollinated varieties had nearly all dried up and quit, this great hybrid went right on producing.* The cucumbers are of excellent quality, too. Nice green color, smooth, 7 to 8 inches long and 2 to $2\frac{1}{2}$ inches through (See color picture on Page 27). The seeds are smaller and there are a lot less of them. Customers simply can't believe their own eyes when they see what this hybrid does. They grow better cukes and more cukes in a lot less space and on a lot fewer vines. You can do it, too, if you plant our hybrid this year. Pkt. 35c; 2 Pkts. 59c; $\frac{1}{4}$ oz. 85c, Postpaid.

GOLDEN HYBRID IOCHIEF

ONION PLANTS

WHITE
BERMUDA

Easy to plant. Easy to grow. And they make tremendous yields of big, mild, sweet onions.

Once you've seen and eaten fine big onions grown from plants, you'll always plant them. Light frosts and freezes, even a light snow, won't hurt them. So, you can put them out extra early to get a full growing season. Plant 4 inches apart, or plant thicker if you plan to thin for early green onions. We have the two best-by-test varieties: WHITE BERMUDA, the mildest you've ever eaten, and YELLOW SWEET SPANISH, a wonderfully mild onion that keeps for months! Both must be planted early if you want the most and best for your money. So, order early. We'll ship at the right time.

CULTURE: One ounce of onion seed will plant 150 feet of row. It takes 5 to 6 lbs. for an acre. One packet will plant about 25 feet. Sow onions early. They like rich, well-drained soil, slightly sandy. Thin to 3 or 4 inches apart in the rows for best results.

The Clean, Easy Way To Plant Potatoes

This Year, Plant SEED POTATO "EYES"

From Genuine Certified Seed

The greatest improvement since seed potato certification! It's no longer necessary to handle heavy potato sacks . . . or bother with cutting the potatoes up. We've saved you this labor by cutting the fertile eye from fresh, clean, Certified Northern Grown Seed Potatoes. They're light (so you pay no shipping charges on heavy potatoes), perfectly clean, and all ready to plant.

Our customers are reporting perfect results with these easy-to-plant eyes. (Clifford Junge of Keystone, Iowa, says the eyes produced as much or more than he got from "cut-up" potatoes, and the quality was really good). Last year we harvested 138 pounds (almost 2-1/3 bushels) of cobblers from 100 eyes.

We guarantee delivery in perfect planting condition (but we can't guarantee we'll have enough to go around, so order early).

Choose from these
three favorites:

17. Red Pontiac

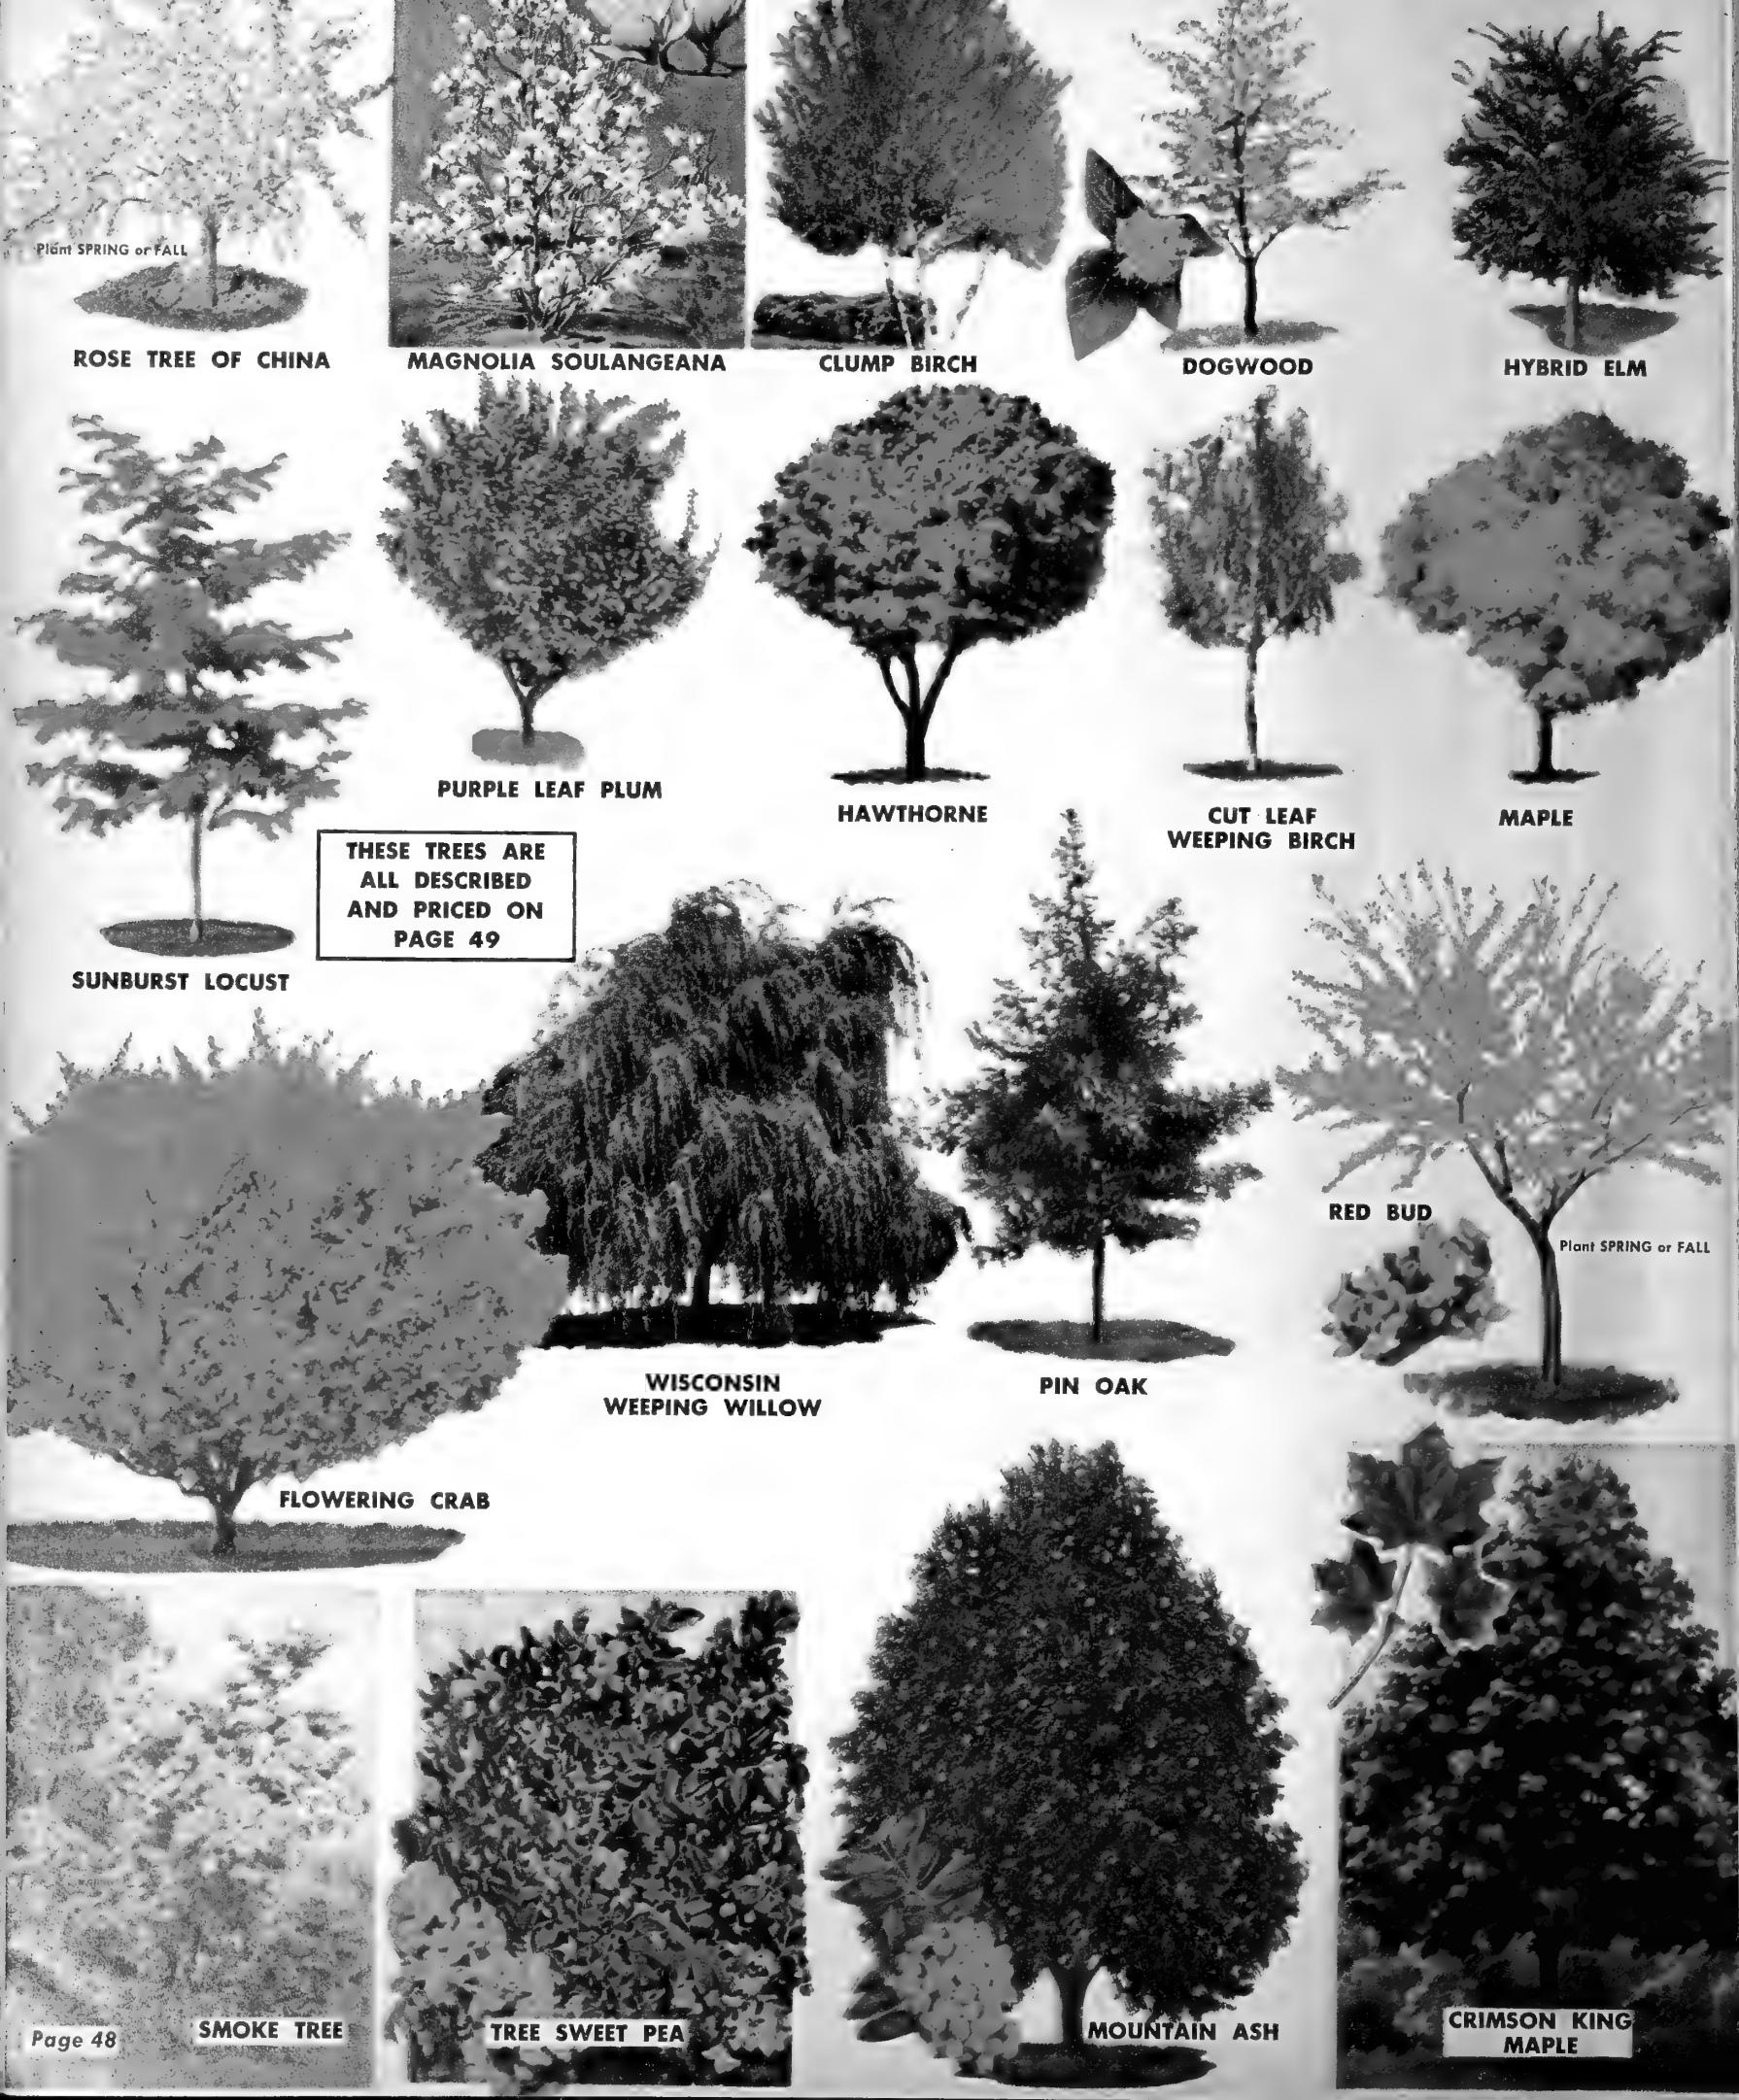

18. Cobbler

100 Eyes, \$1.65; 200 Eyes, \$3.15;

Live Forever ROSE FENCE

ROSA MULTIFLORA grows so bushy and is so thorny that it makes an animal tight fence. So hardy it simply never winter kills. And, in the early summer the bushes are beautifully covered with small white roses. Rosa Multiflora is also highly recommended as a snow barrier, a sanctuary for wild life, and a control for soil erosion. There are lots of places where this Rose Fence is just what is needed. You will never have to paint it, never have to re-set its posts, never have to string the wire on it. It's everlasting and inexpensive, too.

Take a tip from
farmers who have planted
MAYGOLD
HYBRID CORN!

"I use Maygold 59A and like it fine. This past year, I got over 1,600 bushels on not too good rolling ground in Warren County. This corn was tested the same day we finished filling the crib. The government sealer said it was the driest yet, and they'd have no trouble."

C. E. Lundy
Des Moines, Iowa

"I've been using Maygold Corn for 15 years, and I believe it is the finest corn ever developed for our country. The ears fill better than any corn I know of, and Maygold yields when others won't. I always get a perfect stand, and notice Maygold is perfectly graded. I like the deep kernel, too, because it gives overrun shell-outs."

Luther Brockhoff
Fairview, Kansas

"I have been using Maygold for 8 years, and know it is a strong growing corn. It stands good, and mine always plants a fine stand. I've never had to replant. I have been averaging between 45-50 bushels to the acre, without use of fertilizers. It picks good, and feeds the best. I feed it all. It has a good deep kernel. My corn was dry last year, when the elevator men said most corn was too high in moisture content, and other neighbors had to have their corn dried."

Lewis Hartshorn
Odessa, Missouri

JONADEL

Larger Than Jonathan,
More Solid Than Delicious.

6121. Here's the big news in apples: the all-new blight resistant Jonadel apple, a Jonathan-Delicious cross. It bears larger fruit than the Jonathan, averaging nearly 3 inches in diameter. Resembles Jonathan in that it is round, smooth, and symmetrical, with an attractive cherry to dark red color. Skin is smooth and firm enough to provide excellent handling, the flesh is crisp and juicy. Flavor milder than Jonathan, does not get mealy toward end of the storage season. An excellent keeper in storage and does not shrivel. In tests conducted by Iowa State College, Jonadel showed more blight resistance in their tests.

PARK KENTUCKY BLUE GRASS

DISEASE RESISTANT . . . MAKES QUICK, DENSE SOD

990. Here's the greatest lawn grass news in years! New PARK is superior in seedling vigor, germinates quicker and keeps ahead of the weeds. Tests show it is disease resistant, showing only a trace of rust where ordinary blue grasses were from 50 to 100 per cent affected. It makes a quick, dense sod, crowds out weeds because of its vigor; and its deeper, faster spreading root system makes PARK an extraordinary sod-builder. Because of its deep rooting system PARK stays green longer in summer, and is much more drought resistant. PARK Blue Grass was discovered and released by the University of Minnesota, where its development started in 1937 with 281 vigorous plant strains. After studying the entire 281 varieties for total growth, non-summer dormancy, and freedom from disease, it was learned in 1946 that 18 of the selected strains had close similarity of superior growing habits. These 18 were then combined into a single new grass for increase and distribution. Supplies are limited, so order right now to assure delivery.
